

# BRIGHT SOLUTION HEADLAMP CLEANER / POLISH

Thank you for purchasing **BRIGHT SOLUTIONS CLEANER** this is a **1 to 2 STEP** process that takes approximately **10~15 MINUTES** to perform per headlamp dependent upon severity of damage of lamp lens.

**Can Be Used on:** Headlamps      Taillights  
Turn Signal Lights      Reflective Lens Covers

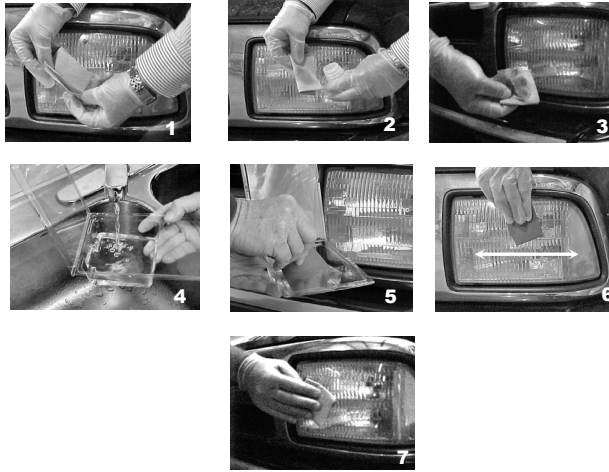

**KEEP OUT OF THE REACH OF CHILDREN**

**DO NOT ALLOW PRODUCT TO FREEZE**

**DO NOT APPLY IN DIRECT SUNLIGHT**

**READ INSTRUCTIONS IN ENTIRETY BEFORE USE.**

**USE ENCLOSED GLOVES TO PROTECT HANDS..**

**FIRST** determine the extent of damage that has occurred over time to your headlamp lens.

**IF** Headlamp lenses are slightly fogged and or yellowed, without visible hairline scratches or crazing, in most cases the lamp can be simply cleaned clear without the use of sandpaper **STEP 1**.

**IF** Headlamp lenses have extensively yellowed, have scratches, crazing and/or pits, sanding is necessary to obtain a successful result **STEP 1 (OPTIONAL)**. Regardless of damage, using sandpaper during cleaning will speed the process dramatically.

## STEP 1 CLEANING

Remove all contents from package.

Select one of the towels and fold in quarters (1).

Thoroughly shake the **BRIGHT SOLUTIONS HEADLAMP CLEANER/POLISH** before applying to towel. Shake the container frequently throughout the cleaning process.

Open the specially formulated **BRIGHT SOLUTIONS HEADLAMP CLEANER/POLISH**, saturate a small area of the towel (2), and begin cleaning the entire lens with a circular motion (3).

Continue cleaning, changing the towel surface and adding more **HEADLAMP CLEANER/POLISH** as towel becomes discolored (4) with dirt and oxidation film of lamp lens.

When dirt and discoloring ceases to be removed from lens, allow cleaner to dry and buff to a high sheen (7).

## STEP 1 (OPTIONAL) SANDING / CLEANING

Empty contents of package and fill cavity of package with water (4), start with 1500 grit sandpaper, dampen sandpaper with water (5) and begin sanding the entire surface of the lens, wetting sandpaper (5) as needed to prevent buildup of particles. Sanding is complete when lamp lens is uniform in appearance.

**Note:** ALWAYS sand in a straight motion (6), DO NOT use a circular motion.

Take the 2000 grit sandpaper and dampen (5), again sand the entire surface of the lens, wetting sandpaper (5) as needed to prevent buildup of particles. This process will reduce the sanding lines .

**Note:** ALWAYS sand in the same direction as previous step and in a straight motion (6), DO NOT use a circular motion.

Select one of the towels and fold in quarters (1).

Thoroughly shake the **BRIGHT SOLUTIONS HEADLAMP CLEANER/POLISH** before applying to towel. Shake the container frequently throughout the cleaning process.

Open the specially formulated **BRIGHT SOLUTIONS HEADLAMP CLEANER/POLISH**, saturate a small area of the towel (2), and begin cleaning the entire lens with a circular motion.

Continue cleaning and polishing, adding more **HEADLAMP CLEANER/POLISH** as necessary to polish the entire lamp lens

When lens has achieved a highly polished appearance, wipe off all polish residue and buff to a high sheen (7)

As with any repair versus replacement, some items will not achieve like new results. If directions are followed, significant improvement in the appearance of the items will be achieved. As we are unable to supervise the application process, user assumes all risks. The manufacturer and its distributors are not liable for any damages incurred by the use of this product. If you are unsure as to the application process, or compatibility of the item you would like to resurface, please contact the manufacturer, or distributor for advise on how to proceed.
